Globecommm at Posidonia: added value for business and crew communications

Join Globecommm Maritime at Posidonia to hear from the experts on how to get the best from next generation ship-shore communications solutions

Specialist communications provider Globecommm Maritime will use the Posidonia 2014 exhibition to showcase the latest additions to its innovative range of connectivity management solutions.

New from Globecommm is Nimbus, a scalable platform solution for managing and simplifying ship and shore-based communications, enabling users to choose the applications and levels of user control that suit them best.

Key Nimbus functionality includes acceleration, compression and caching for improved web browsing, a built-in email server enabling use of any email client and embedded PayPal for pre-pay crew access.

Sales & Marketing Director – Europe, Gregor Ross says Nimbus provides the perfect tool for owners who want to unlock the potential of communications but also stay in control.

“As the bandwidth available to maritime users increases and shipboard networks become more complex, Nimbus permits officers and crew to access a greater range of value added and third party applications, while enabling the owner to retain a practical level of control. Nimbus supports multiple LANs for business, crew, charterer and M2M applications and enables BYOD for business and crew use.”

On Tuesday June 3, Ross joins a panel hosted by FutureCare and Yale University School of Medicine discussing the advantages of telemedicine for crew healthcare in the era of the Maritime Labour Convention.

Earlier this year Globecommm and FutureCare partnered to create FutureCare Live, a video-enabled telemedicine solution integrated into Globecommm’s popular Access Chat service.

FutureCare Live combines Future Care’s *Caring for the Crew*[®] program with Globecommm’s Access Chat Plus live video streaming software to provide a revolutionary level of medical care to commercial shipping and marine personnel during emergency illness or injury at sea.

Ross says the ability of Access Chat Plus to deliver video streaming over low bandwidth connections makes it the perfect partner for FutureCare’s medical services.

/...more

“Shipowners and managers are more than ever focused on the ‘human factor’ as the key to safe and efficient operations. Until now, this focus has lacked the mechanism to truly provide a reliable telemedicine service. Putting Access Chat Plus together with Future Care creates the opportunity to deliver a service that can improve healthcare for mariners and also be highly cost effective.”

Visit Globecommm Maritime at Hall XX, Booth 1530. The FutureCare/Yale seminar will be held at Seminar Room 2, Hall 2, Athens Metropolitan Expo on Tuesday, June 3, 2014, 11:00-13:00.
